

Preamble

As per goals, the University will integrate teaching, research and extension education functions. The Directorate of Education is committed to make our university as epicenter of higher learning in agricultural sciences and allied sectors. Integration of knowledge and technology-driven approaches will lead to generation of quality human resources with appropriate skills and attitude to succeed in today's competitive world. Besides, university is determined to inculcate scientific temperament, nurture unique talents for innovations and creativity to achieve their professional goals and to better prepare youth for their lives. This has been made possible by creation of several university-level platforms and through individual counseling with each student to discover their potential. In order to boost efforts in maintaining quality standards in agriculture education, university is striving to sign memorandum of understanding with leading academic institutions and also networking with other organizations including private industrial partners through planning, coordinating and monitoring of academic activities. It will really help in attaining excellence in agriculture education and making the university as institution of national importance. The major goals for imparting quality teaching are as follows:

Teaching:

- To generate quality human resources, training in agriculture and allied sciences that may fulfill the needs of 21st century.
- To develop technical skills for the coordinating agriculture with different industry.
- To generate agricultural technology and transformation to the rural society for improving their socio-economic status.
- To diversify and industrialize agriculture.
- To produce technically and scientifically sound graduates and postgraduates students, who can provide employment to unemployed rural and urban youths.
